## SUMMARY

---

Full-Stack Developer who learns by shipping complete, production-style apps — AI/voice pipelines, real-time WebRTC systems, payments, and full CRUD platforms across MERN, TypeScript, and PostgreSQL/Prisma — owning each feature end-to-end from UI to deployment.

## TECHNICAL SKILLS

---

**Languages:** Java, JavaScript, TypeScript, Python, HTML5, CSS3, SQL

**Frontend:** React.js, React Router, Vite, Tailwind CSS, Context API, Axios, MediaRecorder/Browser Media APIs

**Backend:** Node.js, Express.js, Bun, REST APIs, FastAPI, JWT, bcrypt, Middleware, CORS

**Real-Time / Communication:** Socket.IO, WebRTC, SDP, ICE candidates, RTCPeerConnection, peer-to-peer signaling

**Databases:** MongoDB, MongoDB Atlas, Mongoose, PostgreSQL, Prisma

**AI / Voice:** Google Gemini API, LLM integration, Whisper/faster-whisper, Kokoro TTS, prompt/context engineering

**Payments / External Services:** Stripe, Stripe Webhooks, Cloudinary, OMDb API, EmailValidation.io, GitHub API

**Tools / DevOps:** Git, GitHub, Docker, Docker Compose, Turborepo, Postman, VS Code, Vercel

## PROJECTS

---

### AI-Powered Voice Interviewer | [Live](#) | [GitHub](#)

- Built a full-stack AI mock-interview platform with a staged workflow (Introduction, Resume, GitHub, Technical, HR, Feedback) using React, TypeScript, Node/Express, and Prisma/PostgreSQL.
- Engineered a real-time voice pipeline (MediaRecorder → Whisper/faster-whisper speech-to-text → LLM → Kokoro TTS) for spoken AI-generated interview questions.
- Integrated resume PDF parsing and GitHub data to generate candidate-specific, context-aware questions with full conversation history tracking.
- Delivered AI-generated post-interview analytics scoring technical performance, communication, and confidence, deployed as Dockerized microservices in a Bun/Turborepo monorepo.

### Veyro — Real-Time Communication & Video Meeting Platform | [Live](#) | [GitHub](#)

- Built a full-stack messaging and video platform (React, TypeScript, Node/Express, MongoDB, Socket.IO) supporting real-time 1-1 chat, calls, and multi-participant meetings.
- Implemented WebRTC peer-to-peer audio/video with Socket.IO signaling, SDP offer/answer exchange, ICE candidate handling, and screen sharing via track replacement.
- Built meeting infrastructure with host controls (mute/remove participants, end-for-everyone), meeting codes, and race-condition-safe signaling validation.
- Secured the platform with JWT authentication, bcrypt password hashing, and Cloudinary media management.

### QuickBasket — Full-Stack Grocery Delivery Platform | [Live](#) | [GitHub](#)

- Developed a full-stack grocery delivery platform (React, Node/Express, MongoDB) with product discovery, search, category filtering, and cart management.
- Implemented dual checkout flows — Cash on Delivery and Stripe payments with webhook handling — alongside JWT-secured customer and seller authentication.
- Built a seller dashboard for product and order management plus customer order history, deployed on Vercel with MongoDB Atlas and Cloudinary.

### SigmaGPT — Full-Stack AI Chat Application | [Live](#) | [GitHub](#)

- Built a ChatGPT-style AI chat app (React/Vite, Node/Express, MongoDB) integrating the Google Gemini API server-side to keep credentials secure.
- Implemented thread-based conversations with persistent chat history — create, switch, retrieve, and delete — via REST APIs and React Context API.
- Added markdown rendering with code syntax highlighting (React Markdown, rehype-highlight) for formatted AI responses.

## EDUCATION

---

**VIT Bhopal University** — B.Tech, Computer Science & Engineering, 2026

## ACHIEVEMENTS

---

- Solved 200+ LeetCode problems in Java, strengthening algorithmic problem-solving across arrays, strings, recursion, trees, BFS/DFS, sliding window, and dynamic programming.

## ADDITIONAL PROJECTS

---

Movie Explorer (vanilla JS + OMDb API) · Email Validator (REST API integration) · Spotify Clone (HTML/CSS/JS) · Calculator · Number Guessing Game · 3D Interactive Portfolio (React)
